

High Speed MILLHOG®

Model HHB-5000
Model HHB-10000
Model HHB-5000RA
Model HHB-10000RA

Straight-Thru, Track Mountable, and Right Angle Models available

Key Features

- Bevels tubes in seconds
- Hand Held or Track Mountable with adjustable depth stop ensures uniform beveled tube ends
- Pilot automatically locates and centers tool on pipe or tube I.D.
- No clamping and no torque reaction to operator
- Cutter blades have multiple cutting edges and require no fluids
- Straight thru and right angle models
- Tooling is interchangeable with all High Speed models
- Fast, accurate and easy to use
- Field proven, tough and boilermaker approved

No Clamping Required

MILLHOG® High speed tube bevelers feature a pilot locating system that automatically centers the tool on the tube. Simple to operate, just insert the pilot into the I.D., squeeze the throttle and finish your end prep completely in as fast as 3 seconds. The high speed cutting action creates no reaction torque, even if the tool is stalled.

Straight-Thru and Right Angle Models

The straight-thru models can be hand-held or used with the Track Chassis and Post Assembly. With this option bevel height is controlled with the adjustable depth stop and ensures all bevels are exactly the same height, saving valuable fit-up time. Right angle models are ideal for applications with height restrictions.

High Speed Bevelers bevel tubes in seconds, no clamping required, the pilot locates and centers the tool on the tube I.D.

The Track Chassis and Post Assembly's adjustable depth stop ensures all tubes are beveled to the same height.

Right angle models fit limited access areas.

The boiler tube panel saw works on the same track as the straight-thru models.

Cutterheads hold the carbide cutter inserts and pilot and can be changed as needed for various tube and pipe sizes.

Cutterheads

Cutterhead Part #	Size		O.D. Dimension		Max. Tube O.D.		Min Tube I.D		Insert Size

Track mountable	yes	no	yes	no
Shipping Dimensions	27in x 18in x 7in (666 mm x 457 mm x 177 mm)			

Pilots center the tool and keep it square to the tube. A properly sized pilot is .015" to .030" under the tube I.D. This tolerance ensures smooth operation, long blade life and chatter free bevels.

Carbide cutter inserts are available with two or four cutting edges and in two sizes.
